

Streamline Delivery

With LiveMaps

**A Pizza Delivery POS
Driven By Excellence**

Features to Love

For pizza delivery, speed is essential; pies must fly out the door. Position yourself for success with a pizza POS platform designed specifically to manage every aspect of your pizzeria or delivery concept.

Traffic & Navigation with LiveMaps

SpeedLine LiveMaps enhances delivery efficiency and controls costs by providing your drivers with real-time, direct navigation to customer locations.

With this feature, drivers:

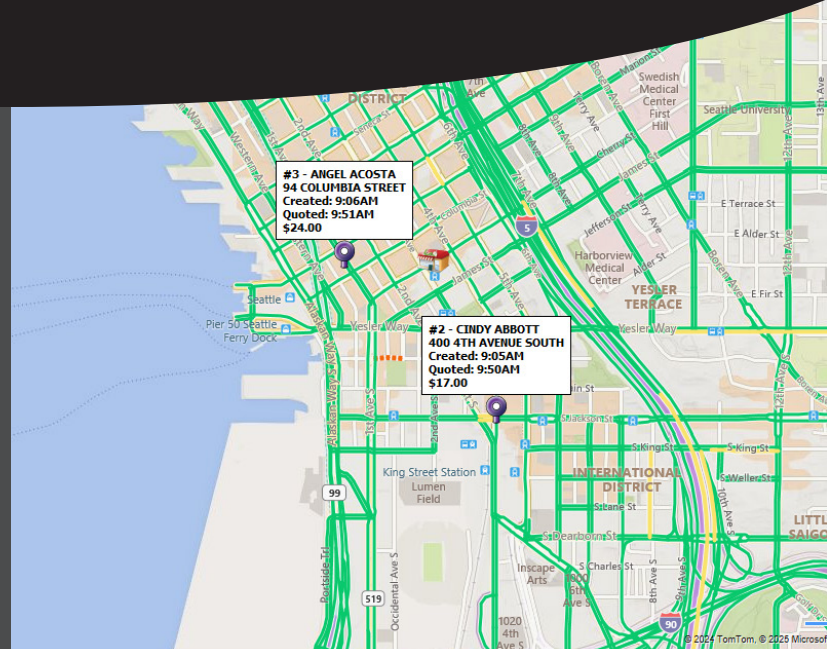

- Receive ticket information and directions sent straight to their smartphones
- Simply click on the address link to choose their preferred navigation service
- Won't get lost, even with new or fill-in drivers, ensuring smooth delivery operations

Visual Dispatch

Dispatching delivery drivers has never been easier or more intuitive. SpeedLine's Visual Dispatch allows for a map view of deliveries, providing a more streamlined approach than traditional order lists.

Key features include:

- **Group Orders for Delivery:** Dispatchers can easily group orders together on the map by touching pushpins, reducing the complexity of managing multiple deliveries
- **Estimated Return Times:** Displayed directly on the screen, this helps managers and dispatchers time orders to be ready when drivers return, improving workflow and reducing delays
- **Live Traffic Consideration:** LiveMaps takes current traffic conditions into account when predicting delivery and return times, optimizing routes for quicker, more efficient deliveries

LiveMaps & Zones

Custom Delivery Zones

Click and drag to adjust zone boundaries at any time. When an order is placed, LiveMaps will auto-assign the customer to a zone based on address, and will charge the specified fees for that zone.

Ensure you're covering costs by assigning the minimum charges for distant zones, and help keep drivers safe by restricting deliveries to certain areas at specified times.

Set Accurate Expectations

Keep your customers in the loop! Quote accurate delivery and pick-up times for every order—updated automatically based on kitchen volume. Warning colors let you see instantly when a delivery has been waiting too long or a driver is late returning.

Send an automated confirmation message once a customer's order has been dispatched, to let them know their order is on the way.

Built for Delivery

DoorDash Drive Integration

If there's a shortage of drivers, tickets can be easily assigned to DoorDash through SpeedLine's Dispatch screen, streamlining order fulfillment.

Use DoorDash Drive so you can:

- Summon a DoorDash driver from Terminal
- View estimated pickup and delivery times and fees before submitting the request
- Filter the Tickets screen by touching a "3rd Party Delivery" button
- Track the delivery on the DoorDash Drive portal

SpeedLine MobilePay

SpeedLine MobilePay is a payment app that lets customers use their chip cards to pay for deliveries on their doorstep, curbside, on a patio, or tableside in a dining room.

It's a win-win: customers get the convenience and EMV card security they want, and your business could save hundreds of dollars each month in lower card-present processing fees and reduced chargebacks including online orders.
